Javier Torralbo Cortés

Software Engineer · .NET Backend & Cloud-Native · CKAD

Málaga, Spain · javiertorralbocortes@gmail.com · linkedin.com/in/javiertorralbocortes · github.com/JavierStark · javiertorralbo.dev

SUMMARY

Software engineer building cloud-native .NET systems. On Verisk's Impact team, modernizing legacy .NET CI/CD in Azure DevOps, containerizing test infrastructure and building a new product with spec-driven, AI-led development. Sole developer of Diana, iGEM UMA's guide RNA design software, whose guides went to wet-lab testing; architected a Canton/Daml tokenized bond platform that became a Bachelor's thesis with ioBuilders. CKAD-certified speaker (50+ attendees at OpenSouthCode) and co-founder of the University of Málaga's DevOps & Cloud course.

EXPERIENCE

Software Developer Intern, Verisk Specialty Business Solutions — Jul 2026 – Present
Málaga, Spain

Impact: web-based exposure-management and aggregation engine for specialty insurers, reinsurers and brokers.

- Modernizing legacy .NET CI/CD pipelines in Azure DevOps and migrating applications onto current .NET and .NET Aspire.
- Containerizing applications with Docker and Podman and building the infrastructure behind the team's test-runner environments.
- Building a new product from scratch with spec-driven development (OpenSpec) and AI-led engineering workflows in an Agile team.

Software Developer, iGEM UMA — Mar 2025 – Present
Málaga, Spain

Diana: official software deliverable of iGEM team UMA-Malaga 2026 for CRISPR-based rare-disease detection.

- Built Diana end to end as sole developer, a Blazor Server (.NET 9) app, F# library and CLI that turn disease variants (HGVS, rsID) into ranked CRISPR-Cas13 guide RNAs.
- Scored guides on GC content, homopolymers, Bowtie off-target alignments and ViennaRNA folding; the scientific team ordered the designed guides and tested them in the wet lab.
- Implemented combinatorial guide pooling on 96/384-well plates (2D and 3D models), decoding positive wells back to individual guides and flagging ambiguous collisions.
- Avoided a 10x+ alignment slowdown by baking a checksum-verified GRCh38 index into a dedicated Docker image instead of a mounted volume; runs non-root with health checks.

Research Intern, Karunya Institute of Technology and Sciences — Jul 2025 – Sep 2025
Coimbatore, India

- Selected through the IAESTE international exchange for a paid 8-week research placement in the Division of Computer Science and Engineering.
- Developed a CNN deep learning pipeline in TensorFlow for pre-ictal epileptic seizure prediction on real patient scalp EEG recordings (CHB-MIT).
- Designed Google Cloud workflows for scalable EEG preprocessing and model training.

President & Treasurer, Computer Science section, IAESTE LC Málaga — Mar 2025 – Present
Málaga, Spain

- Rebuilt the IAESTE Spain national website and the Málaga committee site in React, replacing WordPress and cutting recurring costs by €400/year and nearly €200/year.
- Automated registration and onboarding emails for ~50 new members a year with JavaScript and Google Sheets, making the process paperless and GDPR-compliant.

Earlier Experience

- Freelance Computer Science Tutor, Self-employed (2020–2024): Taught programming and computer science to more than 15 recurring students, most of them across several classes over a full course.

PROJECTS

Tokenized digital bond platform on Canton Network (UMA Blockchain Technologies × ioBuilders) 2026
Daml, Canton Network, Go, .NET Aspire, OpenTelemetry, Docker | https://github.com/JavierStark/Project-CantonDaml-IoBuilders-UMA

- Designed the architecture and Daml layer of a tokenized bond platform on a multi-node Canton distributed ledger, with issue, transfer, burn and DvP settlement exposed through a Go REST backend over the gRPC Ledger API.
- Orchestrated the system with .NET Aspire and instrumented it with OpenTelemetry, Prometheus, Tempo and Grafana; Playwright end-to-end tests cover the bond lifecycle. Led to a Bachelor's thesis with ioBuilders.

CUDECA WATT, donation and event platform (case study for Fundación Cudeca) 2025
ASP.NET Core, C#, Supabase, Stripe, Microsoft Azure, GitHub Actions | https://github.com/JavierStark/Proyecto-ADAp-WATT

- Owned backend, architecture and CI/CD of a donation and event-ticketing platform for a real charity use case (ASP.NET Core 9 Minimal API, Supabase, Stripe, QuestPDF tax certificates, QR tickets).
- Set up GitHub Actions deployment to Azure Web Apps from day one and kept API docs live, so the frontend never blocked; the team implemented the full platform in 23 days under Scrum.

Malackathon (University of Málaga 24-hour hackathon) 2024–2025
C#, Test-Driven Development, GitHub Actions, Microsoft Azure, Oracle Database

- Wrote a test-first C# backend and a fully automated GitHub Actions pipeline publishing web and backend to Azure within the 24-hour hackathon; won the Indra-sponsored award for development quality.

SKILLS

- **Languages:** C#, F#, Go, Python, SQL, Daml, C++, JavaScript
- **Backend:** ASP.NET Core, .NET Aspire, Blazor, PostgreSQL, Supabase, Oracle Database, Angular, React
- **Cloud & DevOps:** Microsoft Azure, Azure DevOps, Kubernetes, Docker, Podman, GitHub Actions, Google Cloud Platform
- **Observability & Testing:** OpenTelemetry, Prometheus, Grafana, Playwright, Test-Driven Development
- **Practices & Domains:** Spec-Driven Development, AI-Assisted Software Development, Scrum, Canton Network, Blockchain / DLT, Bioinformatics

PUBLICATIONS & SPEAKING

- Aspire: orchestration, DevEx and observability with built-in AI, OpenSouthCode 2026, La Térmica, Málaga (2026)
- Workshop: taking a C# Minimal API to production with GitHub Actions and Azure, Hackers Week, ETSI Informática, University of Málaga (with Alejandro Cerezo Contreras) (2026)
- DevOps & Cloud Course (1st edition), co-organizer and speaker, ETSI Informática, University of Málaga (2026)
- Data Science with F#, dotnetMÁLAGA community meetup, hosted at Verisk, Málaga (2026)
- Canton: A Different Blockchain (The Canton Series, Part 1), LinkedIn (2026)

AWARDS

- 1st Place, Ada Byron Regional Programming Contest, 2024 and 2025: Andalusia category and overall winner at UMA both years, University of Málaga
- Malackathon, University of Málaga: Excellence Award in Development and Best Practices (Quality), sponsored by Indra (2024); Honorable Mention (2025)

CERTIFICATIONS

- CKAD: Certified Kubernetes Application Developer — The Linux Foundation / CNCF (2026)
- Oracle Cloud Infrastructure 2025 Certified Foundations Associate — Oracle (2026)
- C1 Advanced (CAE) — Cambridge English (2022)

EDUCATION

- BSc, Computer Engineering — University of Málaga (ETSI Informática) (expected 2027)
